Call for Papers

Welcome to the Sixth International Conference on Internet Computing for Engineering and Science (ICICSE|11) . The conference will be held in Henan Economics and Law University, Zhengzhou, Human, China, 2012.

Internet-based computing is an important and urgent field with multi-disciplinary research. It focuses on algorithms development and implementations of cyber-computing for scientists and engineers. Its impact is already being felt in many science and engineering disciplines. Current research in internet computing requires multi-disciplinary knowledge, not only in sciences and engineering but also in cutting-edge information technologies for academic and research computing. Many science and engineering explorations rely on mature, efficient algorithms and implementations, practical and reliable numerical methods, distributed and large-scale computation systems. Therefore, we have been continuing organize a series of internet computing for engineering areas and science domains. We have successfully organized annually-based conference called International Conference on Internet Computing for Engineering and Sciences. Every conference were held on the campus of Harbin Engineering University in the winter of Harbin (China) in the past, where people touch the base and today's internet computing, while enjoying the beauty of the ice festival. All the previous conferences were very successful events. The ultimate goal of this kind of annual conference is to promote campus-wide research in computer science and information science, especially for graduate students who love to pursue their academic career. The conference vision is to break traditional computer science towards to multidisciplinary domains through internet-based computing and computations for science and engineering. This year we organized the conference again. The conference is the seventh International Conference on Internet Computing for Engineering and Science (ICICSE|12). It will be held on the campus of Henan Economics and Law University, Zhengzhou, Human, China, April 21-23, 2012.

This conference offers academic researchers, developers, and practitioners an opportunity to discuss various aspects of computational science and engineering-related computational methods and problem solving techniques for science and engineering research.

This conference is organized and sponsored by Henan Economics and Law University, Harbin Engineering University, China Space Science and Technology Inc., STEMES, the University of Iowa, and MediX Computing etc. It will be operated by the conference program committee. We hope to attract people from diverse science and engineering disciplines, nationally and internationally, to attend the workshop, present their research results, share their experiences and ideas, and plan future collaborations.

The conference proceeding will be published by Conference Publishing Services (CPS). The conference will be submitted for indexing, including EI index. So far all our previous ICICSE conference proceedings were indexed by EI and others. High quality papers are recommended to IEEE Systems Journal (USA, SCI index), Int. Journal of Computational Science and Engineering (UK, EI Index), Int. Journal of Computational Medicine and Healthcare (UK, EI Index), Journal of Supercomputing (Germany, SCI Index), etc.

We welcome people to submit original paper(s), or participate in conference program. Appreciations always go to people who can organize special sessions, review conference papers, and make this event successful. Submission web site:

Best Regards,

General Chairs

Yadong Zhang, Henan University of Economics and Law, China

Jun Ni, Professor, the University of Iowa, USA

Program Chairs

Shuhong Li, Professor, Henan University of Economics and Law

Qiaorong, Zhang, Professor, Henan University of Economics and Law
